

Not software out of a box, Surgisys' programs allow for growth and expansion in your practice and can also answer your critical need for **pay for performance (P4P)**, **compliance** and **accreditation** without having to change your current practice software.

OUR MISSION IS SIMPLE: Assist healthcare providers in making more informed decisions in order to provide the highest quality of care, ensure compliance, and maximize efficiency and profitability through physician and sonographer-created technology.

The Surgisys suite of Interactive Medical Assessment Programs

point. click. assess.

We all strive to be better at what we do, especially in our practices. That's why Surgisys was created – to help better manage our practice and our patient's outcomes. We focus on medical and surgical data analysis projects from conception to outcomes. Our internet-based, interactive assessment programs provide the most progressive solutions for managing accreditation and practice management data. • Developed by working physicians and sonographers who saw an analysis and reporting void in their own practices, Surgisys, and the iMAP suite of programs provides in-depth solutions that address all aspects of your practice – a scalable, multi-level product that does not entail a learning curve for staff and is fully customizable to your specific needs.

solutions

Your data. Your knowledge. At your fingertips 24/7.

Surgisys melds information technology with superb medical and clinical know how. Intrinsically weaving practice management into specific reporting needs, such as vascular and echo ultrasound or carotid intervention, the iMAP programs require no special training to easily fax or upload information to a secure internet portal. The information is then recorded by the Surgisys staff into your database from which you can request custom reports at any time. In addition Surgisys provides customizable data project reports that deliver high value outcomes. Our ability to adapt to your changing needs, variables and topics assures information integrity and usefulness for the long haul.

advantages

The database engine developed by Surgisys has a powerful yet simple input interface that allows for both business operations and clinical oriented reporting. This reporting capability, diligently overseen by your dedicated project manager, sets Surgisys apart, and provides you the most cutting-edge clinical outcome analysis and reporting technology on the market. Our focus is excellent customer service in every aspect of business. Our state-of-the-art, Internet-based application and hosting services allow you to log in anytime, anywhere and view project progress and perform basic queries for immediate analysis.

Questions to Consider:

1. Is your vascular or echo lab accredited?
2. Do you consistently monitor the competency and performance of your staff?
3. Are you satisfied with your referral base?
4. Are your documented outcomes readily available?

Whether it's the pursuit of accreditation, compliance, pay for performance, practice management or all of the above, in the end you can easily demonstrate your commitment to the highest level of patient care by utilizing the iMAP solutions provided by Surgisys. Our powerful information technology platform and service oriented work flow practices, created by vascular professionals, will help you achieve your goals.

implementation

Surgisys's iMAP programs are unique because they provide a complete package—from input of data to printed outcome reports, including an objective summary evaluation report by our accreditation team who are experts in vascular and echo ultrasound. In essence, we have created a no-hassle process for you and your staff.

A project manager, dedicated to your account, will provide for:

- 1. Evaluation & Planning** — Work with your staff to create parameters and specific data sets needed in order to provide the tracking reports you require.
- 2. Creation of Quick Forms** — Form(s) used by your staff in collecting data. This form is simply e-faxed or uploaded directly to the Surgisys secure web-portal housed at a SAS 70 Data Center.
- 3. Data Entry** — Yes. Surgisys is responsible for the data entry. Surgisys will receive and verify information to make sure it is correct and complete. No need for you to hire extra personnel or burden your current staff.
- 4. Data Analysis** — Surgisys' team of vascular experts query and analyze the information as determined by the parameters you specified during the evaluation and planning stage.
- 5. Report Compilation** — Surgisys' sonographers compile the analyzed and reviewed data to create a professional report for your organization, inclusive of an objective evaluation summary that notes areas that have improved as well as those that still require improvement. This report will reflect your status relative to the accreditation standards for each area of testing performed as well as other data that was specified during the planning and evaluation stage.
- 6. Report Printing & Delivery** — Surgisys prints and binds the professional report(s) then delivers the document per client instructions. If you would prefer, a member of our team can verbally present the report at the time of delivery.
